

[Don't Take It Personal. It's Just A Fake Antivirus](#)

Are YOU protected from online threats?

New research from Microsoft found that millions of computers are not running up-to-date antivirus software

People are spending more time online than ever before, and criminals are getting smarter and more creative in the ways in which they attempt to scam you and steal personal information.

24% of PCs
on average worldwide were not protected by up-to-date antivirus software...

...leaving them, on average, **5.5 times more likely** to be infected with viruses

Antivirus Software

Antivirus software is one of the best lines of defense to help protect people online.

Antivirus software helps to:

Guard against viruses

Remove infections

Protect your privacy

The research showed an increase in dangerous documents. People often encounter this type of threat when opening a malicious document, such as a **PDF or Word document** sent to them as an attachment in an email.

In the fourth quarter of 2012, Microsoft detected and removed malicious documents from almost three million computers.

Average percentage of computers that were unprotected in the second half of 2012

Reasons why you may not be protected:

Your antivirus software was disabled by malware

Your antivirus software trial period has expired or is out of date

People may not realize the importance

Microsoft removes millions of fake antivirus software from people's computers every year. People might be running fake antivirus software without knowing it. It's easy to be fooled as scareware typically looks like the real thing.

In the 2nd half of 2012, Microsoft removed one prevalent scareware package called Onescan, from almost 3 million systems worldwide. Can you tell the difference between real antivirus software and an actual virus? Take Microsoft's Real vs. Rogue test <http://aka.ms/RealvsRogue>

Protect Yourself

You can dramatically reduce the risk of becoming a victim to cybercrime when you're using antivirus software.

Already have antivirus software installed? Check to see that it's running and up to date.

If you don't have antivirus software protecting your computer, install one from a trusted vendor.

Running Windows 8? If so, antivirus is already built into the system
